

VERSONIX

THE ULTIMATE RESERVATION SYSTEM

SEAWARE ANALYTICS

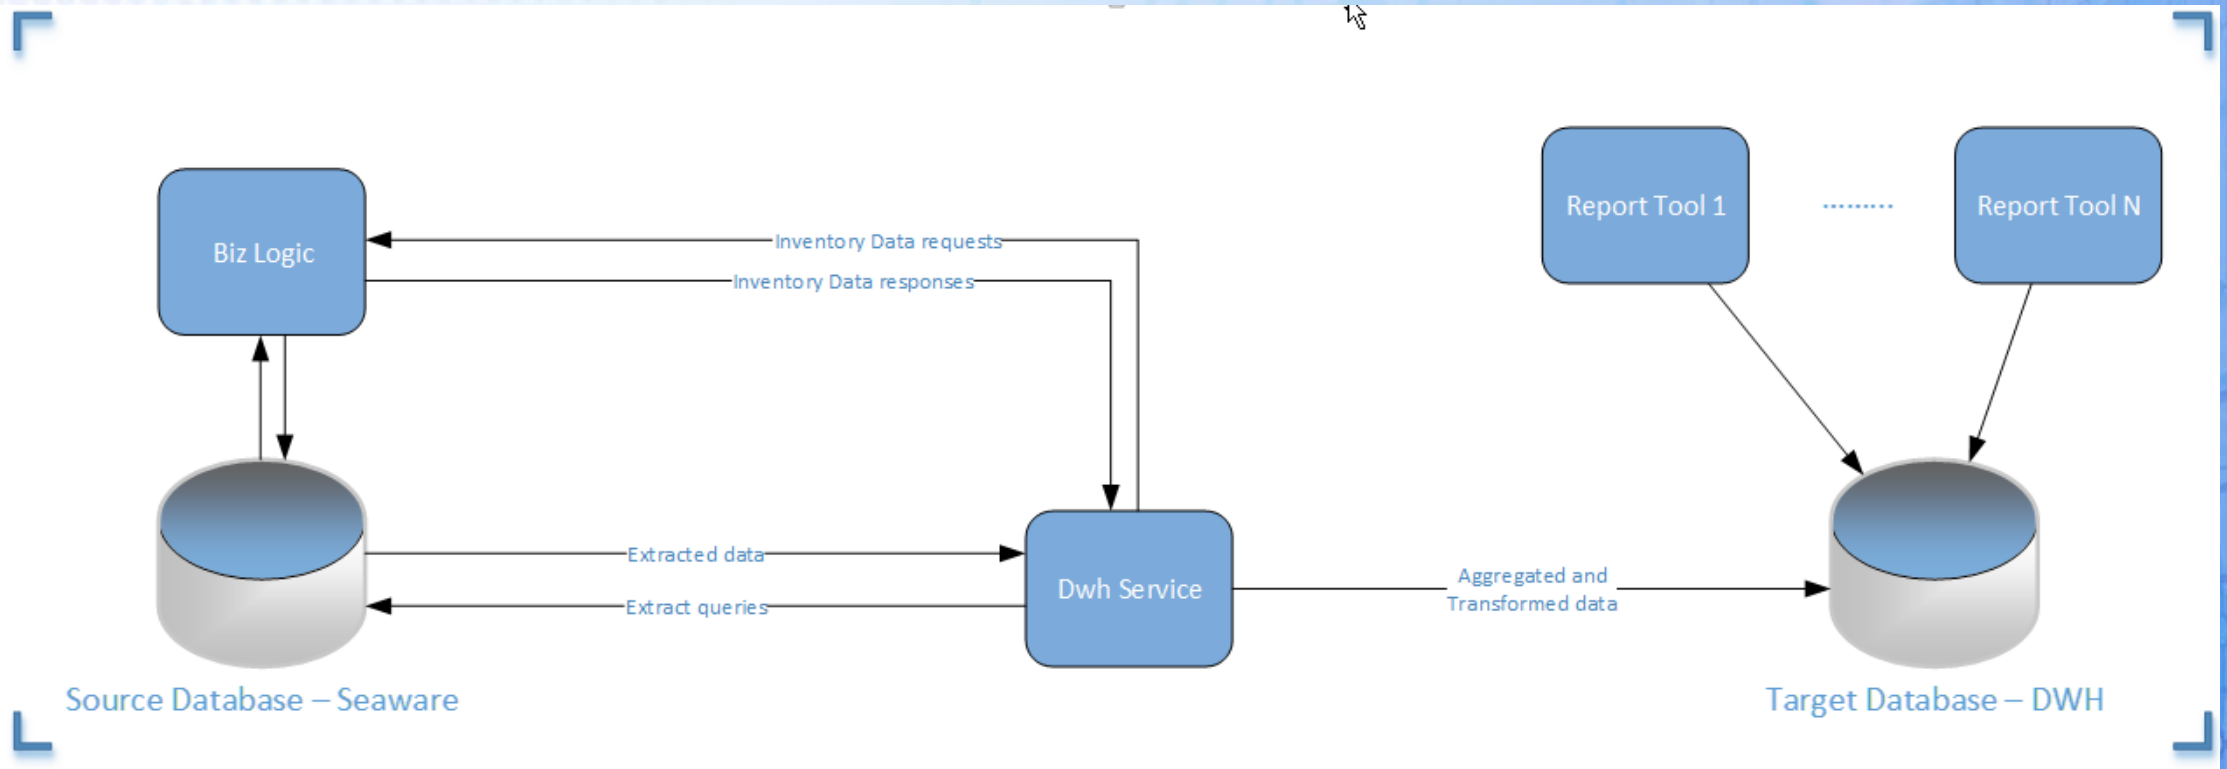

What is Seaware Analytics?

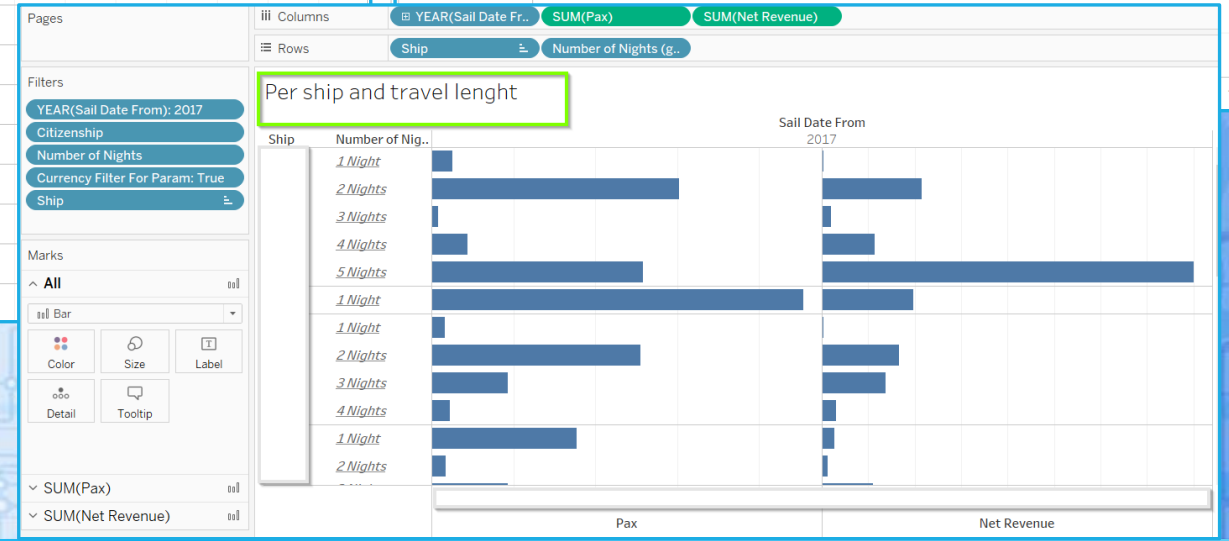

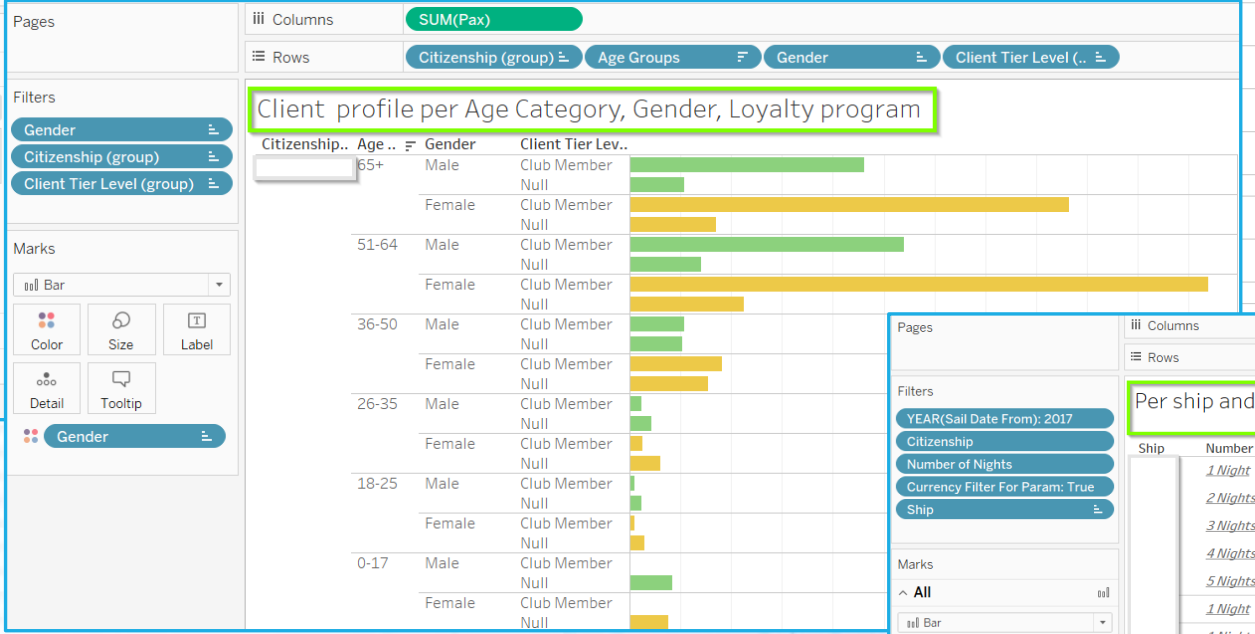

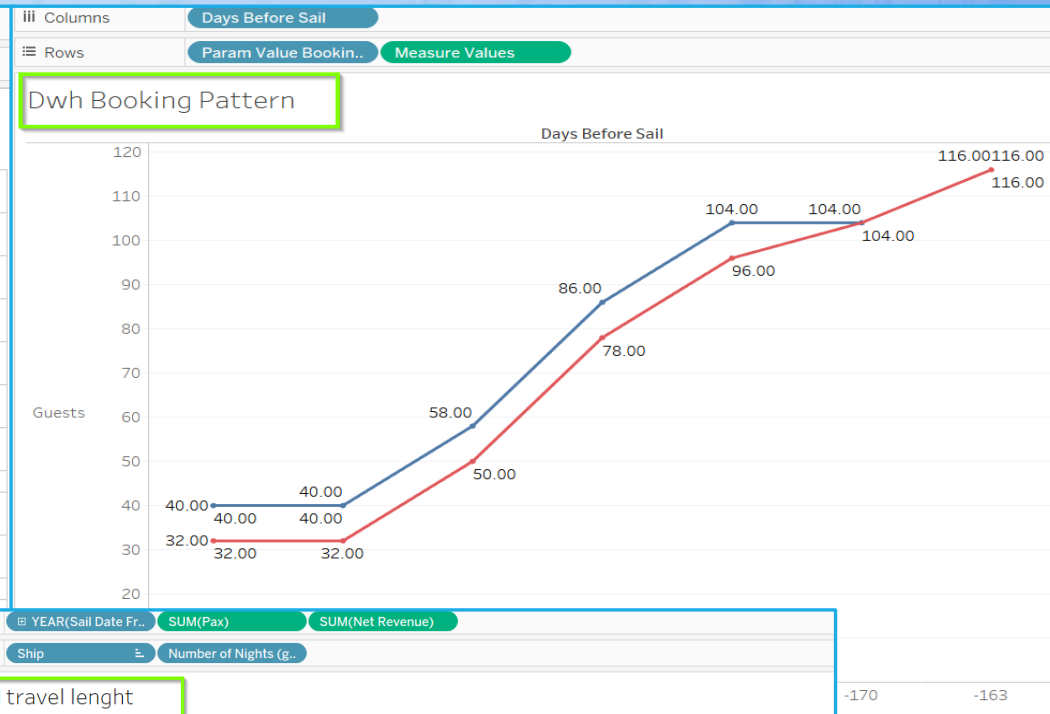

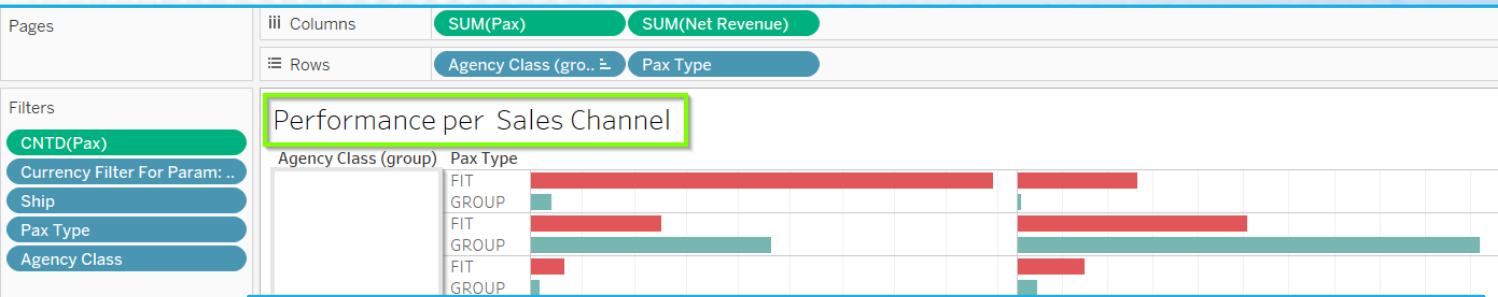

ETL Description

DWH service is WEB service, which aggregate extracted data from Seaware source database and Seaware BizLogic (for getting inventory data) and stores it in DWH Target DB. Target database contains the information for reservations, groups, sails and inventory. Data is extracted based on the scheduled or manual request. First time, all booked data is extracted (Initial step). After initial setup it will store only changed/incremental data. DWH Service stores reservations and groups each time when data was modified. DWH database contains history of changes.
